

BRQ Series

Cylindrical Type Photoelectric Sensor

■ Features

[Common]

- Excellent noise immunity and minimal influence from ambient light
- Power/Output reverse polarity protection circuit, output short over current protection circuit
- Mutual interference prevention function (except through-beam type)
- Sensitivity adjuster
- Light ON, Dark ON switchable by control wire

[BRQT, BRQM, BRQP Series (front sensing type)]

- Various materials: Plastic, Metal (Ni-plated Brass), Stainless steel 316L
- Long sensing distance: 30m (through-beam type)
- Body size - BRQT, BRQM: Standard
BRQP: Standard, Short body
- Protection structure - BRQT: IP67 (IEC standard), IP69K (DIN standard)
BRQM, BRQP: IP67 (IEC standard)

[BRQPS Series (side sensing type)]

- Protection structure: IP67 (IEC standard)

⚠ Please read "Safety Considerations" in the instruction manual before using.

[BRQT, BRQM, BRQP Series (front sensing type)]

BRQT-A
SUS316L Standard

BRQM-A
Ni-plate Brass Standard

BRQP-A
Plastic Standard

BRQP-B
Plastic Short-body

Reflector (MS-2A)

Reflective tape (MST series)

[BRQPS Series (side sensing type)]

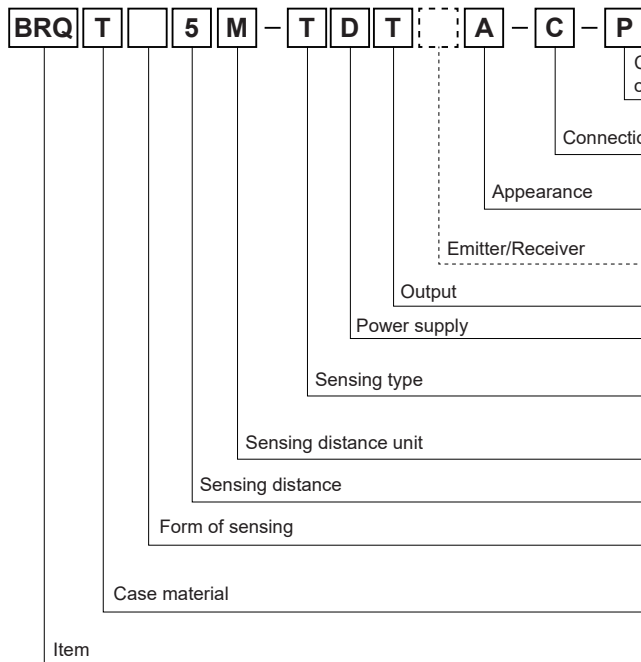

Reflector (MS-2S)

Reflective tape (MST series)

- ※The model name with '-C' is connector type.
- ※Reflective tape (MST series) is sold separately.

■ Ordering Information

Cylindrical Type Photoelectric Sensor (Front Sensing Type)

■ Installation and Adjustment

Install the sensor to the desired place and check the connections. Supply the power to the sensor and adjust the optical axis and the sensitivity as following.

When using the reflective type photoelectric sensors closely over three units, it may result in malfunction due to mutual interference.

When using the through-beam type photoelectric sensors closely over two units, it may result in malfunction due to mutual interference.

When installing the product, tighten the screw with a tightening torque of 14.7N·m for BRQT/BRQM and 0.39N·m for BRQP.

○ Through-beam type

1. Supply the power to the photoelectric sensor, after setting the emitter and the receiver facing each other.
2. Set the receiver in center of position in the middle of the operation range of indicator adjusting the receiver or the emitter right and left, up and down.
3. After adjustment, check the stability of operation putting the object at the optical axis.

※If the sensing target is translucent body or smaller than $\varnothing 7\text{mm}$, it can be missed by sensor cause light penetrate it.

○ Retroreflective type

1. Supply the power to the photoelectric sensor, after setting the photoelectric sensor and the reflector (MS-2A) or reflective tape in face to face.
2. Set the photoelectric sensor in the position which indicator turns on, as adjusting the reflector or the sensor right and left, up and down.
3. Fix both units tightly after checking that the unit detects the target.

※Sensitivity adjustment

: Refer to the diffuse reflective type's.

○ Diffuse reflective type

1. The sensitivity should be adjusted depending on a sensing target or mounting place.

2. Set the target at a position to be detected by the beam, then turn the sensitivity adjuster until position ㊸ where the operation indicator turns ON from min. position of the Sensitivity adjuster.
3. Take the target out of the sensing area, then turn the Sensitivity adjuster until position ㊹ where the the operation indicator turns ON. If the indicator dose not turn ON, max. position is ㊹.
4. Set the sensitivity adjuster at the center of two switching position ㊸, ㊹.

※Be aware of the fact that sensing distance can be different by size, surface and gloss of the target.

■ Reflectivity by Reflective Tape Model

Model	Standard	Short body
MST-50-10 (50×50mm)	40%	40%
MST-100-5 (100×100mm)	50%	80%
MST-200-2 (200×200mm)	80%	85%

※This reflectivity is based on the reflector (MS-2A).

※Reflectivity may vary depending on usage environment and installation conditions.

The sensing distance and minimum sensing target size increase as the size of the tape increases.

Please check the reflectivity before using reflective tapes.

※For using reflective tape, installation distance should be min. 20mm.

■ Installation and Adjustment

Install the sensor to the desired place and check the connections.

Supply the power to the sensor and adjust the optical axis and the sensitivity as following.

When using the reflective type photoelectric sensors closely over three units, it may result in malfunction due to mutual interference.

When using the through-beam type photoelectric sensors closely over two units, it may result in malfunction due to mutual interference.

When installing the product, tighten the fixing nuts with a tightening torque of 0.39N·m.

◎ Through-beam type

1. Supply the power to the photoelectric sensor, after setting the emitter and the receiver facing each other.
 2. Set the receiver in center of position in the middle of the operation range of indicator adjusting the receiver or the emitter right and left, up and down.
 3. After adjustment, check the stability of operation putting the object at the optical axis.
- ※If the sensing target is translucent body or smaller than $\varnothing 7\text{mm}$, it can be missed by sensor cause light penetrate it.

◎ Retroreflective type

1. Supply the power to the photoelectric sensor, after setting the photoelectric sensor and the reflector (MS-2S) or reflective tape in face to face.
 2. Set the photoelectric sensor in the position which indicator turns on, as adjusting the reflector or the sensor right and left, up and down.
 3. Fix both units tightly after checking that the unit detects the target.
- ※Sensitivity adjustment : Refer to the diffuse reflective type's.

◎ Diffuse reflective type

1. The sensitivity should be adjusted depending on a sensing target or mounting place.
 2. Set the target at a position to be detected by the beam, then turn the sensitivity adjuster until position ㊸ where the operation indicator turns ON from min. position of the sensitivity adjuster.
 3. Take the target out of the sensing area, then turn the sensitivity adjuster until position ㊹ where the the operation indicator turns ON.
- If the indicator dose not turn ON, max. position is ㊺.
4. Set the sensitivity adjuster at the center of two switching position ㊸, ㊹.
- ※Be aware of the fact that sensing distance can be different by size, surface and gloss of the target.

■ Reflectivity by Reflective Tape Model

MST-50-10 (50×50mm)	25%
MST-100-5 (100×100mm)	30%
MST-200-2 (200×200mm)	35%

- ※This reflectivity is based on the reflector (MS-2S).
 ※Reflectivity may vary depending on usage environment and installation conditions.
 The sensing distance and minimum sensing target size increase as the size of the tape increases.
 Please check the reflectivity before using reflective tapes.
 ※For using reflective tape, installation distance should be min. 20mm.
