Design/Function

Type 5470 NAMUR can be easily mounted directly to a process valve.

High cycle life, diaphragm seat design valves in 3/2 and 4/2 way versions. The main valve consists of three modules; the valve body with servo-diaphragm, plungers and seat seals; solenoid operator with P/R connections and NAMUR manifold.

The body and valve internal parts are made of high quality thermoplastic and the return spring is made of stainless steel.

A 16 mm rocker solenoid valve Type 6106 with rectifier is used as the pilot.

Type 6106 impulse version is a bistable valve used as pilot valve for Type 5470. The operation has to be done through external pole reversal (e.g. PLC).

The advantages of the impulse version are functional safety at short time power failure, saving of energy and low heat generation.

It is applicable for switching systems with impulse control.
