

Insertion Flow sensor for continuous flow measurement

Type 8020 can be combined with...

Type 8034

Flow indicator
Wall or Panel

Type 8025

Flow transmitter
Wall or Panel

Type 8023

4–20 mA
output module

Typ 8623-2

PI Flow–
Controller

Type 2712 (8630)

Continuous
TopControl System

PLC

- Economic integration into pipe systems
- 2–wire frequency coil (sinusoidal) version
3–wire frequency Hall effect (pulse) version
to directly interface with PLC's (both PNP
and NPN)
- Can be upgraded to a low cost transmitter
providing a calibrated pulse or 4–20 mA
- Connection to Burkert devices in remote
versions

The paddle–wheel flow sensor for continuous flow measurement is especially designed for use in neutral, slightly aggressive, solid free liquids. The Burkert designed fitting system ensures simple installation of the sensors into all pipes from 1/2" to 16".

The sensor produces frequency signal (coil or Hall effect), proportional to the flow rate, which can easily be transmitted and processed by:

- a Burkert remote transmitter/indicator (Type 8025/8034/8032 remote versions)

- a transmitter module 8023 into a 4–20 mA output signal
- a pulse divider module 8021 into adjustable frequency output signal
- a batch controller 8600 mounted on a valve

General data	
Compatibility	with all fittings S020 (see corresp. datasheet)
Materials	
Sensor housing	PVDF
Housing	PE
Union nut	PC
Cable plug	PA, brass electro–silver–plated
Materials wetted parts	
Paddle–wheel	PVDF
Axis and bearing	Ceramic
Seal	FKM/EPDM
Electrical connections	Cable plug EN 175301–803
Voltage supply cable	
Cross–section	1.5 mm ² max.
Recommended length	max. 33 ft, shielded (coil sensor) max. 165 ft, shielded (hall sensor)

Complete device data (fitting + electronic module)	
Pipe diameter	1/2" to 16" (DN 15 to 400)
Measuring range	
Hall	1.0 ft/s to 32.8 ft/s (0.3 m/s to 10 m/s)
Coil	1.6 ft/s to 32.8 ft/s (0.5 m/s to 10 m/s)
Medium temperature max.	122°F (50°C) with PVC fitting 176°F (80°C) with PP fitting 212°F (100°C) with St.St., brass or PVDF fitting
Fluid pressure max.	145 PSI
Viscosity	300 cSt. max.
Accuracy	
Teach-In	≤ ±0.5% of F.S.* (at 32.8 ft/s)
Standard K-factor	≤ ±(0.5% of F.S. + 2.5% of Reading)*
Linearity	≤ ±0.5% of F.S.* (at 32.8 ft/s)
Repeatability	0.4% of Reading*

Electrical data	
Power supply	
Coil version	None
Hall version	12–30 VDC
Hall "low power" version	12–30 VDC (via Burkert transmitter)
Current consumption	
with sensor	
Hall version	< 50 mA
Hall "low power" version	< 0.8 mA
Output: Frequency	
Coil version	Alternating 0–10V, frequency: 0–300 Hz, Transistor NPN/PNP, open collector, max. 100 mA, frequency: 0–300 Hz
Hall version	Transistor NPN, open collector, Frequency: 0–300 Hz
Hall "low power" version	
Reversed polarity of DC	Protected

Environment	
Ambient temperature	
operating and storage	32°F up to 140°F (0°C up to +60°C)
Relative humidity	≤ 80%, non condensated
Standards and approvals	
Protection class	IP65
EMC	EN 50081–1, 50082–2

* Under reference conditions i.e. measuring fluid=water, ambient and water temperature=68°F, applying the minimum inlet and outlet pipe straights, matched inside pipe dimensions.
F.S.=Full scale (10 m/s)

Installation

The flow sensor consists of a transducer and an open-cell inline rotor.

When immersed in the flow, the rotating inline rotor produces a frequency modulated measuring signal proportional to the flow.

In a 2- or 3-wire system, the signal can be displayed or processed directly. The output signal is provided via a 4-pole cable plug per DIN 43650.

In the versions with 4-20 mA/adjustable frequency output, an additional NEMA 4 (IP65) housing is plugged on the sensor instead of the cable plug. The output signals are available on a terminal strip inside the enclosure via a PG 9 cable gland.

All parts in contact with fluid are in PVDF or ceramic, enabling use in aggressive fluids.

Installation

The recommended In- and Outflow straight pipe length should permit 10xD in and 3xD out.

According to pipe's design, necessary distances can be larger or use a flow conditioner to obtain the best accuracy. For more information, please refer to EN ISO 5167-1.

The flow sensor can be installed in either horizontal or vertical pipes.

The suitable pipe size is selected using the diagram on the next page. Pressure and temperature ratings must be followed according to the selected fitting material (see next page).

The flow sensor is not designed for gas flow measurement.

Principle of Operation

When liquid flows through the pipe, the inline rotor is set in rotation producing a measuring signal in the transducer (coil or Hall Sensor). The induced voltage is AC. The frequency and amplitude are proportional to the flow.

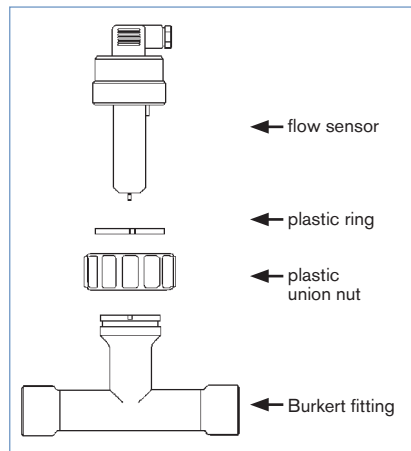

The version 8020 "low power" flow sensor can only be operated with a flow transmitter 8025 in panel or wall-mount version. It can measure flow from 1.0 ft/s (0.3 m/s) flow velocity.

The flow sensor 8020 with coil requires no external power supply and measures flow from 1.6 ft/s (0.5 m/s) flow velocity. This flow sensor can also be operated with a flow transmitter 8025 in panel or wall-mount version.

The flow sensor 8020 with Hall Sensor requires an external power supply of 12-30 VDC and measures flow from 1.0 ft/s (0.3 m/s) flow velocity.

The flow transmitter 8020 with 4-20 mA output requires an external power supply of 12-24 VDC and measures flow from 1.0 ft/s (0.3 m/s) flow velocity.

The flow sensor 8020 with adjustable frequency output requires an external power supply of 12-30 VDC and measures flow from 1.0 ft/s (0.3 m/s) flow velocity.

Examples of fitting selection

The suitable pipe size is selected using the diagram below.

Example 1:

Specification of nominal flow: 50 gpm

Ideal flow velocity: 8 fps

For these specifications, the diagram indicates a pipe size of 1-1/2".

Example 2:

Specification of nominal flow: 10 m³/h

Ideal flow velocity: 2-3 m/s

For these specifications, the diagram indicates a pipe size of DN 40.

Pressure – temperature diagram for plastics

DTS 1000082462 EN Version: A Status: RL (released | freigegeben | validé) printed: 22.09.2017

Flow sensor 8020 diagram (gpm, DN in inch and fps)

Example 1:

- Specification of nominal flow: 10 m³/h
- Ideal flow velocity: 2...3m/s
- For these specifications, the diagram indicates a pipe size of DN 40

Example 2:

- Specification of nominal flow: 50 gpm
- Ideal flow velocity: 8 fps
- For these specifications, the diagram indicates a pipe size of 1 1/2"

Technical data

General Data

Pipe diameter	From 1/2" (for more detailed information, please see chapter fittings)
Measuring range	1.0 fps to 32.8 fps (0.3 m/s to 10 m/s) From 0.9 gpm (1/2" pipe, 1.0 fps flow velocity) From 3 l/min (DN 15 pipe 0.3 m/s flow velocity)
Measuring error	1. With individual works calibration (on request): $\leq \pm 0.5\%$ o.F.S. (at 33 fps)* 2. With standard mean K-factor: $\leq \pm (0.5\%$ o.F.S. + 2.5% o.R.)*
Linearity	$\leq \pm 0.5\%$ o.F.S. (at 33 fps)*
Repeatability	0.4% o.R.*
Pressure class plastic and metal fitting	84 PSI, PN 6
Ambient temperature	32°F to 140°F (0°C to 60°C)
Storage temperature	32°F to 140°F (0°C to 60°C)
Enclosure	NEMA 4. (Relative humidity max. 80%)
Pulses/rotation	2
Sensor housing	PVDF
Inline rotor	PVDF
Axis and bearing	Ceramic
Housing	PE
Union nut	PC
O-rings	FKM/EPDM

Specific Data for 8020 with Coil

Fluid temperature max.	PVC: 122°F (50°C); PP: 176°F (80°C); PVDF: 212°F (100°C); Stainless steel and brass: 212°F (100°C)
Measuring range	1.6 to 32.8 ft/s (0.5 to 10 m/s)
Supply voltage	none
Output signal	AC: approx. 0–10 V, frequency: 0–300 Hz
Cable length	33 ft. (use shielded cable of max. 1.5mm ² wire cross section)

Specific Data for 8020 with Hall Effect

Fluid temperature max.	PVC: 122°F (50°C); PP: 176°F (80°C); PVDF: 176°F (80°C); Stainless steel and brass: 176°F (80°C)
Measuring range	1.0 to 32.8 ft/s (0.3 to 10 m/s)
Supply voltage	12–30 VDC
Output signal	Transistor PNP, NPN open collector max. 100 mA; frequency: 0–300 Hz
Cable length	165 ft. (use shielded cable of max. 1.5mm ² wire cross section)

Specific Data for 8020 with Hall Effect "Low Power"

Fluid temperature max.	PVC: 122°F (50°C); PP: 176°F (80°C); PVDF: 176°F (80°C); Stainless steel and brass: 176°F (80°C)
Measuring range	1.0 to 32.8 ft/s (0.3 to 10 m/s)
Cable length	165 ft. (use shielded cable of max. 1.5mm ² wire cross section)
(Can only be connected to separate versions of flow transmitter/indicator Type 8025, 8023, 8021, SE34)	

Specific Data for 8020 with 4-20 mA Output (8023)

Associated flow sensor	Coil and Hall low power version
Supply voltage	12–24 VDC
Output signal	4–20 mA
Load	Max. 500Ω at 12 V Max. 1000Ω at 24 V
Accuracy	$\leq 2\%$
Material of additional housing	PA

Specific Data for 8020 with Calibrated Frequency Output (8021)

Associated flow sensor	Hall sensor versions
Supply voltage	12–30 VDC
Output signal	Transistor PNP, NPN open collector max. 100 mA
Accuracy	0.1%
Material of additional housing	PA

* Under reference conditions, i.e. measuring fluid = water, ambient and water temperature = 68°F, applying the minimum inlet and outlet pipe straights, matched inside pipe dimensions
o.R. = of reading
o.F.S. = of full scale (33 fps)

Operation and display

Type 8023, 4-20 mA Output Module

The operation is specified according to two levels:

Indication in operating mode
 – Flow (digits and bargraph)

Parameter definition
 – K-factor
 – Time unit
 – 4-20 mA measuring range

The device works without the control unit. The control unit enables performance by parameter definition.

Type 8021 Adjustable Frequency Output Module

- 1, 2, 3 rotary switches for factor K programming.
- 5, 6, 7 jumpers for decimal position of factor K.
- 4 rotary switch for multiplier D programming.
- 8 reset jumper.

The operation is specified according to the following level:

Parameter definition
 – K-factor
 – Multiplier D
