

Angle Changer Narrow, Polarized

± 10° beam angle, for bar light LBAXxxx

ZBAG101

Part Number

Technical Data

Optical Data

Beam angle ± 10 °

Polarization Filter yes

Mechanical Data

Housing Material ABS, PC, PVAL, TAC

- Costs reduced by the use of smaller luminaires
- Create patented curve effect to reduce LED hot spots
- Improved scanning rate
- Increased homogeneity
- Quick and easy beam-angle change, ideal for project changes and feasibility studies

wenglor ZBAG0xx are optical accessories for the LBA bar lights. They are small optical diffusers that increase the beam angle emitted from the bar light. This allows the user class leading flexibility from a single light source. The angle changers allow the user to create a variation of light outputs on a single product, enabling patented lighting techniques such as the curve effect. The angle changer widens the beam angle of the LBA bar lights up to the specified value of the opening angle stated in the datasheet.
