# Hollow Shaft Encoders

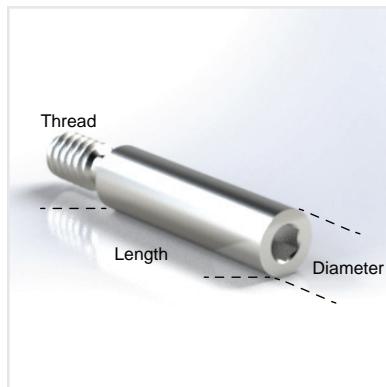

are designed with either a through-bore or blind-bored shaft which mounts to a rotating shaft. They "float" on the shaft eliminating the need for a shaft-to-shaft coupling and mounting adapter, saving space and cost. A tether or flexible mounting bracket prevents the encoder from turning and absorbs shaft-to-shaft misalignment increasing bearing life. Select from a wide offering of body sizes and styles.

# Wheel Encoders

ride directly on the moving material. The wheel tread has a high coefficient of friction, and have a very low starting torque resulting in virtually no slippage. The wheel's circumference is precision ground with exacting tolerances translating into an integral number of encoder pulses per unit of linear movement.

# Absolute Encoders

generate a digital code indicating the angular position of the shaft. Each increment of one shaft rotation is given a unique digital code for a single-turn encoder. When power is first applied, shaft position is immediately known without having to home the encoder. Even if the shaft is moved when power is off, shaft position is not lost. Select from a wide offering of body sizes and styles.

## About Us...

**T**RI-TRONICS® Co. Inc., together with Photocraft, offers a wide range of rotary encoders for industrial automation and motion feedback control.

For more than 60 years, we have provided innovative solutions for real-world applications. We understand our customers have a job to do and have no time for issues. That is why every one of our products is individually tested for durability and reliability, so they stand the test of time.

Our mission is to amaze our customers, improve their business, and promote mutual prosperity. We recognize that our customers are kings and no two companies are alike. This is why we tailor solutions to fit your needs and will do whatever it takes to help you succeed.

All our products are assembled in the United States at our 28,000-sq. ft. facility in Tampa, FL. Our agile workforce attends to the needs of our customers - big or small - to complete requests with short turnaround times.
